

ODICHE OBIAKARIJE

Data & AI Engineer

Maryland, US | +1 717-343-6901 | odicheobiakarije@gmail.com | [LinkedIn](#) | [GitHub](#) | [Website](#)

PROFESSIONAL SUMMARY

Passionate Data & AI Engineer with 5+ years of experience delivering scalable intelligent systems. My specialization spans the full data engineering lifecycle, ETL/ELT pipelines and delivering agentic/generative AI solutions across cloud-native platforms. Skilled in agentic AI: RAG pipelines, LangChain/LangGraph orchestration, tool-use, and LLM integrations. Proven at translating complex business processes into intelligent, automated systems that deliver measurable outcomes.

EXPERIENCE

Data & AI Engineer | Accenture | Remote

Dec 2022 – Present

- Built a multi-agent RAG solution using OpenAI LLMs to automate rebate-related Q&A workflows, improving client team efficiency by ~60%.
- Engineered task-specific AI agents with advanced prompt engineering, tool/function calling, and structured outputs to evaluate enterprise metadata quality at scale across several records.
- Integrated LLM agents with Streamlit and Pinecone vector databases to enable hybrid search and reasoning over structured and unstructured enterprise data.
- Reduced data integration errors by 40% through automated data quality pipelines; ensured data consistency across Prod/Stage/Dev environments.
- Served as the data product SME on the team, responsible for data curation, coordinating data requirements across stakeholders, and supporting agentic data product design.
- Partnered with business stakeholders across iterative sprints to refine prompts, agent behaviors, and evaluation for accuracy and adoption.
- Used Python and LangChain to embed and vectorize unstructured data for semantic search and agentic use cases, including workflow guardrails, retries and checkpointing.
- Used AI tools including Copilot and LLM prompting to support data cataloging workflows and generation of business definitions for data attributes.

Data Engineer | Rekor Systems | Remote

Oct 2020 – Nov 2022

- Designed end-to-end ETL pipelines to ingest, process, and analyze real-time traffic data using Python, Airflow, and Kafka.
- Built and fine-tuned Python-based analytical models to support risk analysis and operational dashboards.
- Implemented data validation and quality checks, reducing downstream errors by 35% across Prod/Stage environments.
- Designed and maintained data and document pipelines and data flows to support application modernization, ensuring reliable data movement across integrated systems.
- Resolved support tickets and production incidents through root-cause analysis, applying REST API integrations and SQL-based fixes to address recurring data issues.
- Led technical ingestion and integrations across environments (Prod/Stage/Test/Dev), reducing manual processing time by 60% and ensuring data consistency and reliability during deployments.

TECHNICAL SKILLS

AI & ML: LangChain, LangGraph, OpenAI Agent SDK, AutoGen, CrewAI, RAG Pipelines, MCP, Multi-Agent Systems, Tool/Function Calling, Prompt Engineering, Pinecone, HuggingFace, spaCy, Scikit-learn, Cursor, Claude Code, Snowflake Cortex, Databricks Genie, Guardrails & Evaluation

LLM APIs: OpenAI GPT-4o, Anthropic Claude, Google Gemini, DeepSeek

Data Engineering: Snowflake, Databricks, Unity Catalog, Apache Kafka, PySpark, Hadoop, AWS Glue, Airflow, ETL/ELT, dbt, Collibra, Pandas, Pinecone, PGVector, Postgres
Cloud: AWS (S3, Redshift, Bedrock, Lambda, RDS), Azure (ADF, Blob Storage, Data Lake, Delta Lake), Docker, Kubernetes
Programming: Python, SQL, NoSQL, Java, R, HTML
Tools: Git/GitHub, Tableau, Postman, UiPath (RPA), Agile/Scrum, FastAPI, Pydantic, Power BI, QGIS, UV

CERTIFICATIONS

Snowflake SnowPro Core — Snowflake Inc.

EDUCATION

B.S. in Computer Science — University of Pittsburgh

August 2019
